

UNIVERSITÄT ZU LÜBECK

Trustworthy & Human-Centered AI

Project: Requirements

Rebecca von Engelhardt

Steps

1. **Find a group** (2-3 people)
2. **Choose a topic** discussed during the lecture
3. Define your concrete **research question**
4. Come up with a **study plan** how to test your research question

--- at this point you should upload a short video (max. 5min) explaining your concept ---

5. **Implement** your idea
6. **Test some participants** (e.g. other students, friends)
7. **Analyse your data** (be careful with interpretations due to probably small sample sizes!)

--- hand in a project report ---

Rough (Preliminary) Schedule

- **As soon as possible (end of April?):** Find a group (2-3 people)

Note: We expect you to find a group by yourself. If you tried but still have problems, get in contact with us. Please do so early enough. Once the project started, it might be difficult to integrate in an already ongoing group work.

- **End of April:** Ideas, framework and rough requirements of the project will be presented
- **Beginning of May:** Technical details and information regarding the study design will be presented

--- develop a concept, research question, ideas for the implementation, test the environment ---

- **End of May / beginning of June:** Upload a short video explaining your concept

Note: These videos will be uploaded in Moodle and we expect to watch the videos of the other groups to also compare and discuss different approaches in your final report. We will also give some feedback and might open feedback options from other students for further discussions.

--- implementation, data collection, analysis ---

- **Mid of July:** Hand in the final report

Aspects of the Exposé (Video: max. 5min)

- **Motivation:**
 - What problem / research gap are you focussing on?
 - Why is it relevant? Why are you interested in it?
- **Relation to the lecture:**
 - What lecture content are you referring to?
 - How does your topic relate to or differentiate from others?
- **Research question:** What research question is addressed (related to the research gap)?
- **Hypothesis:** What do you expect as a result (and why)? What are your reasons behind this hypothesis?
- **Concept:** How do you want to address the problem?
- **Method:**
 - What is your study plan? How do you want to realise it?
 - How do you plan to implement your idea?
 - What do you have to consider for your study (e.g. different conditions)?

Aspects of the Final Report (max. 6 pages)

- You should include some aspects you already discussed in the exposé including your motivation, hypothesis, and a description how you addressed your research question.
- **Literature & definitions:** What is the basis for your study?
- **Data acquisition:** How did you collect your data? Who? Gender? Age?
- **Analysis and results:** How did you analyse your data and what are the results?
- **Your standpoint:** What do we learn from the example? Did the research question get answered? Did the example help to gain more knowledge about the research gap?
- **Critical discussion of your project:** What went well? What problems did you have? What would you do differently next time? What are the limitations and where is the informative value perhaps only limited?
- **Relation to other projects:** What is similar or different to the project ideas of the other groups?
- **Outlook:** What could be potential next steps to go?

Evaluation Criteria (of the Final Report)

- We will have a look at the different aspects listed on the slide before
- Most important for us:
 - Good explanation of why you implemented what and how
 - The idea or concept behind your changes and / or study
 - Operationalisation and realisation (including reasons and potential problems or difficulties)
 - Critical reflection of your study
 - Connection with concepts from the lecture on trustworthiness
- We will also consider the complexity, but: Difficult changes without good substantiation will not get you a good grade 😊
- **A detailed list with concrete scoring criteria will be uploaded in Moodle!**

Additional aspects

- Comprehensibility, relevance, and structure
- Complexity, novelty, and creativity: Idea and / or implementation
- References: full and correct citation for all sources in APA 7 – in text and bibliography (incl. MATB, OpenMATB, software, ...)
- Structured code and data
- Bonus points for special efforts

Formal Requirements of the Final Report

- Max. number of pages: 6
 - What is included in the six pages: everything except acknowledgements and bibliography, i.e. all text, abstract, title, figures, tables, etc.
 - What is not included: the bibliography, acknowledgements
 - An appendix is not allowed
 - Anything beyond the six pages will be ignored and assessed as 'not available'
- Overleaf
 - A template is available in Moodle.
 - Please copy the template to work on it with your group.
 - If you need a license please transfer the ownership to: rebecca.engelhardt@uni-luebeck.de
 - It is not allowed to change aspects such as layout, font size, etc. (anything that changes the formatting or ensures that you get more text on fewer pages)
- Language: English

Formal Requirements of the Final Report

- **Maximum pages:** the maximum number of pages (including illustrations, abstract, etc., sole exception: EXCLUDING bibliography, acknowledgements) has been adhered to (anything beyond this will be ignored and assessed as 'not available'), appendix **NOT** allowed
- **All files uploaded** (on time): raw data as .csv (without personal information such as names), code for the analysis and plot generation, MATB scenarios, short demo video of the experiment, any other useful file (you will not receive a grade anyway before we have all necessary files)
- **Correct file naming:** all files (both the .zip file and all files contained therein such as MATB folder, report, data) are named as follows (here as an example for the report)
'group_name_name1_name2_name3_report.pdf'

⇒ These are formal requirements: Points will be deducted if the criteria are not met.

Upload All Your Data

Please upload one ZIP file containing...

1. your final report
2. short demo video of the experiment (only of the relevant parts)
3. other useful files, especially **raw data as .csv**, MATB scenarios, and code for the analysis and plot generation, if applicable – **you will not get a grade without uploading those files**

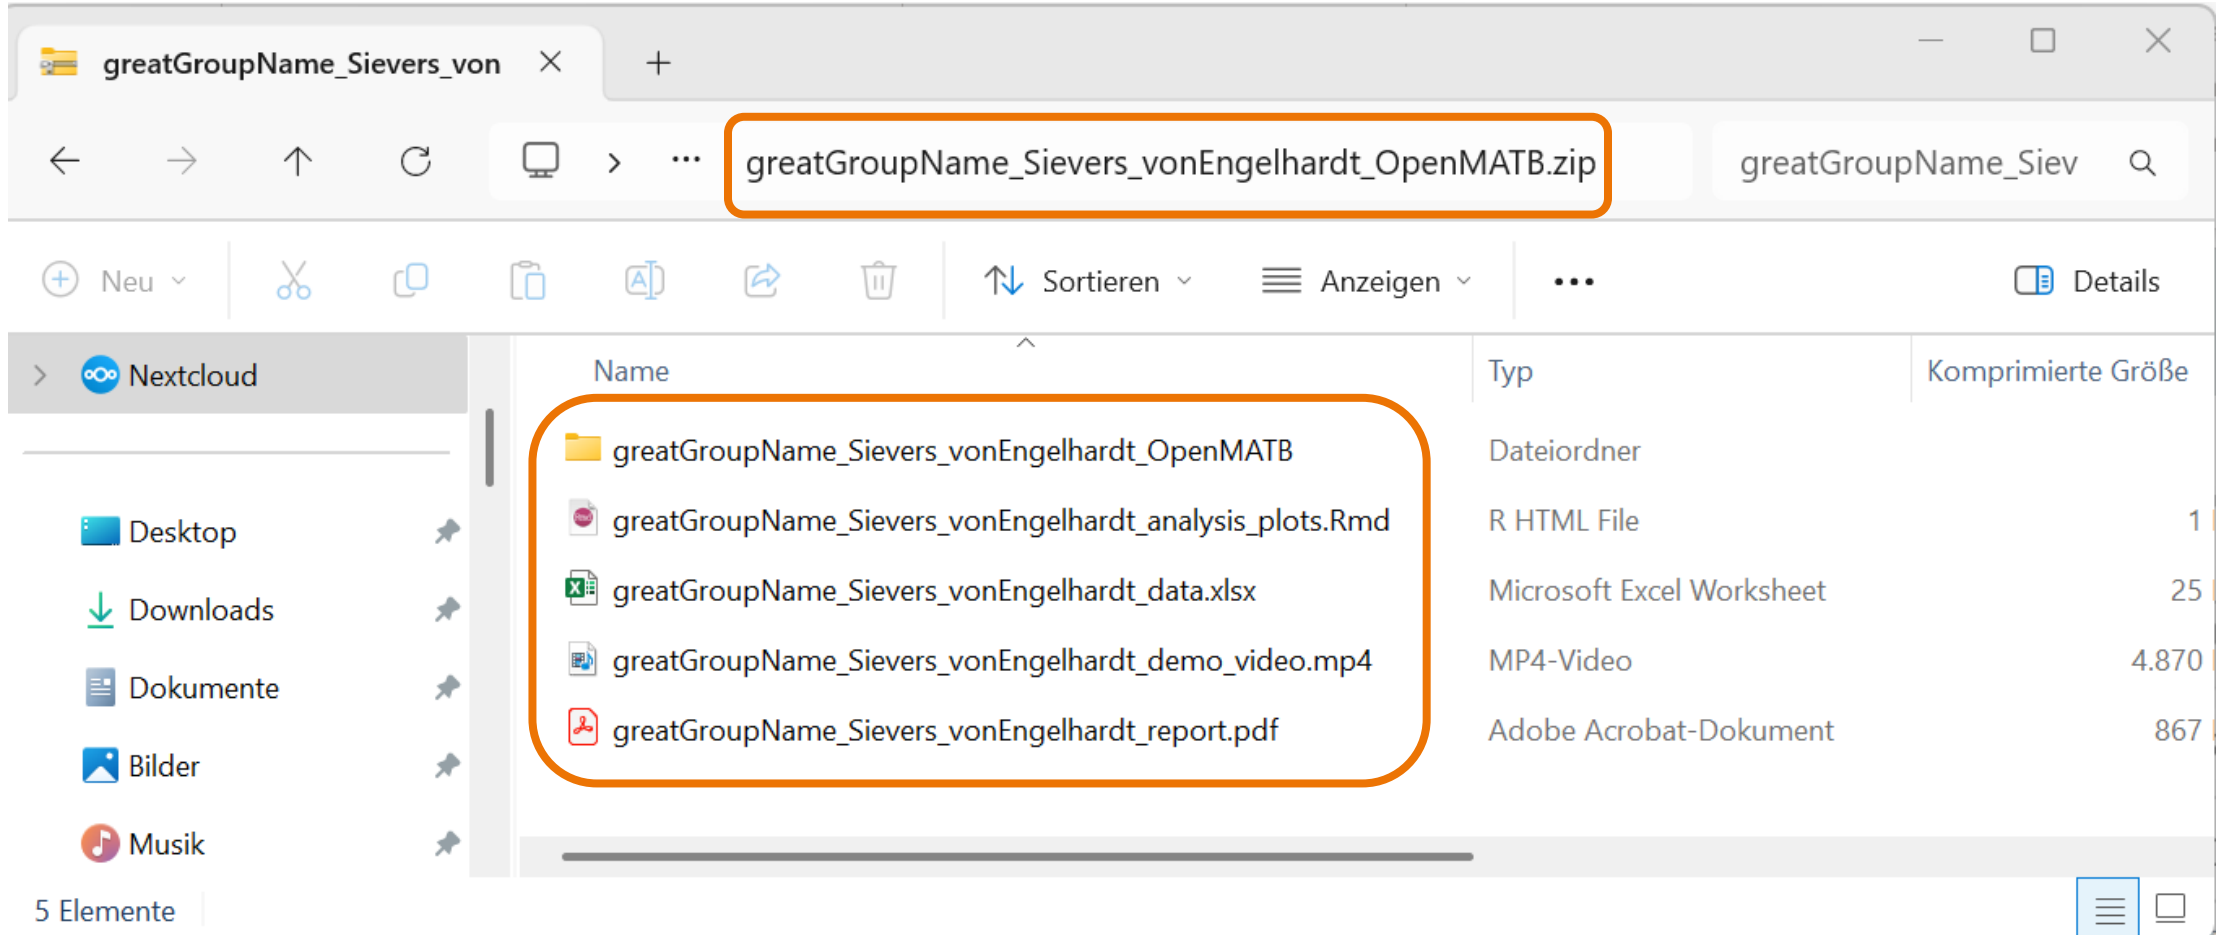

Please name **ALL** files (.zip, .pdf, ...) e.g. **GroupName-name1-name2-name3-report.pdf**

Please upload only **one** submission per group

Regarding the files:

- The report should be understandable even without access to the code and data.
- **Please remove all personal data** (e.g. names of the participants) before uploading the data, so that it is anonymous.
